

AI MCQ Cheat Sheet (Questions & Answers)

1. This step converts raw categorical text labels into numerical values.

Answer: Label Encoding

2. Which of the following: Epoch time, Rotation, or Variance threshold?

Answer: Variance Threshold

3. Anti-pattern in production agent memory system design.

Answer: Always storing 100% conversation history

4. Which hyperparameter controls the depth of a decision tree?

Answer: max_depth

5. Why is data minimization important in AI?

Answer: Reduces risk of privacy breach

6. What is hallucination in AI systems?

Answer: Model generates factually incorrect content

7. What is a logit in LLM output?

Answer: Unnormalized score for each vocabulary token

8. What happens when chunk size is too large in RAG?

Answer: Retriever returns fewer but less focused chunks

9. What is quantization in LLM deployment?

Answer: Reducing precision to improve efficiency

10. What does transparency mean in AI?

Answer: Clear explanation of AI behavior

11. What is an observation in an agentic system?

Answer: New information received from environment

12. What is test data leakage?

Answer: Training data leakage into evaluation benchmarks

13. What is RLAIIF?

Answer: AI models generate preference labels

14. Key benefit of evaluation harness?

Answer: Detect regressions automatically

15. What is LLM observability?

Answer: Monitor, trace, and analyze LLM behavior

16. Technique for step-by-step reasoning?

Answer: Chain-of-thought prompting

17. Goal of task-specific fine-tuning?

Answer: Improve performance on a specific task

18. What shapes tone in an email?

Answer: Opening greeting style

19. Does supervised fine-tuning use labeled data?

Answer: Yes

20. Three pillars of observability?

Answer: Logs, Metrics, Traces

21. Loan approval AI concern?

Answer: Model lacks explainability

22. Output of text encoder in VLM?

Answer: Vector representation of text

23. Effect of shorter prompts?

Answer: Lowers token cost

24. Direct application of VLM?

Answer: Visual Question Answering

25. MCP primitive for action?

Answer: Tool

26. Purpose of controlled vocabulary?

Answer: Predefined authoritative set of terms

27. What is dropout?

Answer: Randomly setting neurons to zero

28. What is linked data?

Answer: Structured data using standard formats

29. What is random forest?

Answer: Ensemble of trees with majority voting

30. MCP core primitives?

Answer: Tools, Resources, Prompts

31. What is prompt compression?

Answer: Shortening prompts to reduce token count
